

Extension cable set CEP24 for 24V or CEP230 for 230V actuators with AMP plugs.

- Extension cable set for easy connection of standard fire damper actuators with AMP plugs
- The set consists of a 2-pole cable for the power supply and a 6-pole cable for the end switches
- Simple connection if the standard actuator cable is too short, e.g. for the connection of 2 actuators to one UFC24-2 or UFC230-2
- Different cable versions for 24V and 230V actuators
- Pre-assembled, 2m length, „plug and play“

Application

When using the UFC devices it can happen at the job site that one of the actuators is mounted more than 1m away. With the extension cable a laborious construction for the connection of the actuator can be avoided.

Products

- A-CEP24; extension cable set for 24 V fire damper actuators with AMP plugs
- A-CEP230; extension cable set for 230 V fire damper actuators with AMP plugs
