

Universal System M30

**AUTOMATIC COMMISSIONING -
the perfect system for small sized projects**

The Universal System M30 monitors and controls up to 30 fire or smoke extraction dampers in one zone (AHU). It has never been easier to build up a system. These are the main advantages:

- » **Simple and price attractive** - less components, comprehensive applications, all-inclusive solution
- » **Remote access included as standard** - connection via Cloud and App without additional costs. Access to the controller possible at anytime from anywhere
- » **Automatic commissioning** - the controller automatically takes the system into operation during start up
- » **The M30 controller is the cabinet** - inputs and outputs for alarms and air handling unit are integrated
- » **Integrated intelligence** - automatic baud rate detection for BACnet, run time monitoring of the actuators as well as bus monitoring function are integrated as standard in the UFC devices
- » **Intuitive** - simple handling via touch screen
